

MILESTONE 2

Student Dashboard & Learning Overview

Enterprise Learning Platform – Skill & Career Guidance System

1. Milestone Overview

Milestone 2 focuses on developing the **Student Dashboard**, which becomes the primary workspace for authenticated students after completing the login and JWT authentication flow established in Milestone 1.

The dashboard provides students with a centralized view of their learning activities, course progress, achievements, certificates, study activity, recommendations, and notifications.

The objective is to give students a clear overview of their **learning journey and career development progress** from a single interface.

2. Milestone 2 Objectives

The Student Dashboard should allow an authenticated student to:

- View a personalized welcome message
- View learner XP
- Track active courses
- Track completed courses
- Monitor study hours
- View XP points
- Track learning streak
- View achievements
- View certificates
- Continue ongoing courses
- View enrolled courses
- Monitor weekly learning progress
- View notifications
- View recent achievements

- Discover recommended courses
 - Navigate to different learning and career modules
-

3. Student Dashboard

The dashboard is available after successful authentication.

The dashboard should be connected to the authenticated student account so that the information displayed is specific to the logged-in user.

Welcome Section

The dashboard displays a personalized greeting such as:

Welcome, [Student Name]

The section may also display:

- Current learning streak
- Motivational message
- Current learning focus
- Learner XP

Example:

You are on a 5-day learning streak. Master new skills, track your progress, and accelerate your career path.

4. Learner Statistics

The dashboard provides a summary of the student's learning activity.

The following statistics are displayed:

Active Courses

Shows the number of courses currently being studied.

Completed Courses

Shows the number of courses successfully completed.

Study Hours

Displays the student's accumulated learning/study time.

XP Points

Displays experience points earned through learning activities.

Learning Streak

Displays the number of consecutive days the student has maintained learning activity.

Achievements

Displays the number of achievements earned.

Certificates

Displays the number of certificates obtained.

These statistics should be dynamically connected to the student's activity data.

5. My Enrolled Courses

The **My Enrolled Courses** section displays courses in which the student is currently enrolled or has previously enrolled.

Each course card/list item should display:

- Course thumbnail
- Course name
- Instructor/creator
- Course category
- Progress percentage
- Progress indicator
- Course status
- Continue/View action
- Certificate availability where applicable

Example Courses

The dashboard design demonstrates courses such as:

- Digital Marketing and SEO Mastery
- 3D Animation and Modeling
- Python Programming – Beginner to Advanced
- Effective Communication and Public Speaking

The actual course data should come from the backend/database rather than being hard-coded.

6. Course Progress

Each enrolled course should display the student's current progress.

Example:

Progress: 100%

or

Progress: 0%

The progress indicator should visually communicate how much of the course has been completed.

The system should update course progress as the student completes learning activities.

7. Continue Learning

The **Continue Learning** section highlights the course that the student should continue next.

It should display:

- Course category
- Course name
- Current progress
- Estimated duration
- Resume Course button

Resume Course

Selecting **Resume Course** should take the student to the appropriate point in the course.

The system should preserve the student's learning progress so they can continue where they previously stopped.

8. Weekly Progress

The dashboard includes a **Weekly Progress** section to show the student's learning activity for the current week.

The section may display:

- Weekly completion percentage
- Learning activity
- Pending quizzes
- Streak information
- Weekly learning targets

Example:

75% weekly progress

The system should calculate this information from the student's actual learning activity.

9. Recent Achievements

The **Recent Achievements** section displays achievements earned by the student.

Examples include:

First Enrollment

Awarded when the student enrolls in their first course.

Course Finisher

Awarded when the student completes a course.

Future achievements can include:

- Learning Streak
- Quiz Master
- Skill Master
- Roadmap Completion
- Certificate Earned
- Internship Ready

Each achievement can contain:

- Achievement icon
 - Achievement name
 - Description
 - Date earned
 - Achievement status
-

10. Notifications

The dashboard contains a notification section for important student updates.

Notifications may include:

- New course recommendations
- Course completion
- Quiz reminders
- Assignment deadlines
- Certificate availability
- Achievement unlocked
- Internship opportunities
- Roadmap updates
- Platform announcements

The dashboard should provide a **View All Notifications** option.

11. Recommended Courses

The **Recommended** section provides personalized learning recommendations.

Recommendations can be based on:

- Student interests
- Enrolled courses
- Completed courses
- Skill gaps
- Career roadmap
- Previous learning activity
- Assessment results

Example recommendations include:

Marketing

Content Marketing and Copywriting

Programming

Java Programming Fundamentals

The recommendation engine can be enhanced in later milestones with AI/personalization.

12. Dashboard Navigation

The Student Dashboard includes a sidebar for accessing major platform modules.

Navigation Items

- Dashboard
- Catalog
- My Courses
- AI Tutor
- Roadmap
- Skill Gap
- Resume
- Practice
- Assignments
- Quizzes
- Certificates
- Careers
- Sessions

- Analytics
- Notifications
- Profile
- Settings

The navigation structure provides the foundation for the modules that will be implemented in subsequent milestones.

13. Global Search

The dashboard includes a global search field.

Students can search for:

- Courses
- Roadmaps
- Mentors
- Learning resources

The search interface should provide quick access to relevant platform content.

14. Student Profile Area

The top navigation contains the authenticated student's profile area.

It should display:

- Student name
- Profile/avatar
- User role
- Profile menu

The profile menu can provide access to:

- Profile
- Account settings
- Logout

The profile information should be retrieved from the authenticated user's account.

15. Dashboard Data Integration

The dashboard should not rely on static values in the final implementation.

The following information should be retrieved dynamically:

- Student information
- Enrolled courses
- Course progress
- Completed courses
- Study hours
- XP
- Learning streak
- Achievements
- Certificates
- Notifications
- Recommendations
- Weekly progress

The dashboard APIs should use the authentication mechanism established in Milestone 1.

16. JWT Integration

Milestone 2 builds directly on the JWT authentication system developed in Milestone 1.

The dashboard should only be accessible to an authenticated user.

Authentication Flow

Login

↓

JWT Generated

↓

Authenticated Student

↓

Student Dashboard Request

↓

JWT Sent to Backend

↓

JWT Verification Middleware

↓

Student Identity Retrieved

↓

Student-Specific Dashboard Data

↓

Dashboard Display

This ensures that one student cannot access another student's private dashboard information.

17. Protected Dashboard APIs

The following APIs should be protected using JWT authentication:

- Get Student Dashboard
- Get Student Profile
- Get Enrolled Courses
- Get Course Progress
- Get Achievements
- Get Certificates
- Get Notifications
- Get Weekly Progress
- Get Recommendations
- Get Learning Statistics

Each request must verify the authenticated student's identity.

18. Responsive Design

The dashboard should be responsive across:

- Desktop
- Laptop
- Tablet
- Mobile

The sidebar, cards, course lists, statistics, and content sections should adapt to smaller screens.

The design should avoid:

- Overlapping content
 - Broken cards
 - Horizontal scrolling
 - Unreadable text
 - Inaccessible controls
-

19. UI / UX Requirements

The dashboard should follow the visual language established in Milestone 1.

Design Characteristics

- Clean modern interface
- Green/mint visual theme
- Rounded cards
- Soft shadows
- Clear typography
- Consistent icons
- Progress indicators
- Responsive layouts
- Clear visual hierarchy
- Student-friendly interface

Dashboard Components

- Sidebar navigation
 - Top navigation
 - Search bar
 - Welcome card
 - Statistics cards
 - Course cards
 - Progress indicators
 - Achievement cards
 - Notification cards
 - Recommendation cards
-

20. Functional Requirements

Feature	Expected Result
Dashboard Access	Only authenticated students can access it
Welcome Section	Displays personalized student information
Learner XP	Displays current XP
Active Courses	Displays current active course count
Completed Courses	Displays completed course count
Study Hours	Displays accumulated study time
Learning Streak	Displays current streak
Achievements	Displays earned achievements
Certificates	Displays certificate count
Enrolled Courses	Displays student's courses
Course Progress	Displays accurate completion percentage
Continue Learning	Allows student to resume a course
Weekly Progress	Displays current weekly activity
Notifications	Displays relevant student notifications
Recommendations	Displays recommended learning content

Search	Allows course/roadmap/mentor search
Navigation	Provides access to platform modules
Profile	Displays authenticated student profile
Responsive UI	Works across supported screen sizes

21. Milestone 2 Deliverables

Student Dashboard

- Dashboard layout
- Personalized welcome section
- Learner XP
- Active course statistics
- Completed course statistics
- Study hours
- Learning streak
- Achievement count
- Certificate count

Learning

- Enrolled courses
- Course progress
- Continue Learning
- Resume Course functionality
- Weekly progress
- Recent achievements
- Recommended courses

Platform

- Sidebar navigation
- Global search
- Student profile area
- Notifications
- Responsive dashboard

Backend/API

- Dashboard API
 - Student profile API
 - Enrolled courses API
 - Course progress API
 - Achievements API
 - Certificates API
 - Notifications API
 - Recommendations API
 - Learning statistics API
 - JWT-protected dashboard endpoints
-

23. Milestone 2 Outcome

At the completion of Milestone 2, the platform will provide an authenticated **Student Dashboard** that acts as the central learning workspace.

The student will be able to see:

Profile + Learning Statistics + Enrolled Courses + Course Progress + Weekly Activity + Achievements + Certificates + Notifications + Recommendations

The dashboard is securely connected to the JWT authentication system from Milestone 1 and provides the foundation for the next stage of the platform.

Final Milestone Statement

Milestone 2 delivers the authenticated Student Dashboard and Learning Overview, providing students with a centralized, personalized, and secure view of their courses, learning progress, achievements, certificates, notifications, recommendations, and career-development activities.
